

**Lids and gable products
for paper tubes**

The Eliasson Plast history.

In 1965, our production started as a department of a family-owned cardboard sleeve company. In 1976, an independent company was established through a merger of the injection moulding departments of two companies producing cardboard sleeves. The focus at that time was on packaging products such as lids, plugs and end caps for cardboard sleeves. These products are still a major product group today but have been supplemented with our own products for the plant cultivation industry and subcontract moulding for various industries.

Eliasson Plast is part of the Swedish industrial group Eitrium since 2022. Today we have about 30 machines in sizes from 50-400 tons and the business is conducted in modern factory of 5000 m². Our production consists of approximate 50% own products that we stock for fast deliveries. Our warehouse also constitutes a production buffer to be able to quickly adjust when acute needs arise with our customers. We are also able to provide distributions and safety stocks to customers. When developing new products we can support with the whole chain from idea to finished product. Thanks to our technical expertise, stable financial situation, buffer stocks and high-capacity utilization, we can maintain high quality at humane prices with timely delivery. All for our customers' service and safety.

Injection molding

There are many plastics with different properties to choose from when designing your product. There are also many aspects to consider such as appearance, tolerances, environmental impact, Co2eq/kg, manufacturing cost, lifespan, surrounding environment, load, regulatory requirements, etc. The choice of material is therefore a very important part of the development process for a product. It is important that design and material selection work together to ensure both function and quality.

We have extensive experience in developing products for injection molding and can help you with the entire journey from idea to series production. With a modern machine park, a modern business system and large network, we are a safe supplier choice.

Manufacturing plastic products

Plastic is a material we see everywhere, both in industry and in our homes. Today, high demands are placed on products and their properties, which has led to extensive development of plastic materials and production technology that benefits both industry and business.

We at Eliasson Plast have over 55 years of experience in contract manufacturing of plastic products for customers in several industries. Since our start, we have also started manufacturing our own products in packaging and plant cultivation for customers around Europe.

Gable

Gable for paper tube with hole for axle.

Product id	Reference	Qty/Box	Qty/Pallet
